

Reasons to Remove Leaves from the Yard in Fall

Autumn is a beautiful time of the year as the weather starts changing in autumn to a cooler temperature and the trees start shedding their golden leaves. Yes, it is a beautiful time of year when the leaves are still on the trees, but not so beautiful when they are laying all over your yard.

Aesthetics aside removing these leaves will help you have a healthier lawn. They will smother the grass by forming a layer that prevents sunlight and air from getting to the grass. They will stain pool decks, walkways and driveways. Insects and spiders love to hide in the leaves. Keeping leaves out of your home drainage pipes will keep water from backing up and causing a problem. Damp leaves can be a source for mold, which triggers allergic reactions in some individuals.

As you can see, there are many good reasons to remove leaves from your lawn. Not only will your lawn be healthier, but you will be healthier too.

Please feel free to contact me if you need additional assistance.
